                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 47
S78202
H-transporting two-sector ATPase (EC 3.6.3.14) protein 8 - fission yeast (Schizosacchar C:Species: mitochondrion Schizosaccharomyces pombe
C;Becession: S78202
C;Accession: S78202
C;Accession: S78202
R:Lang, B.F.
submitted to the EMBL Data Library, August 1990
A;Description: The mitochondrial genome of the fission yeast Schizosaccharomyces pombe: chizosaccharomyces pombe and Aspergillus nidulans.
A;Reference number: S78195
A;Accession: S78202
A;Accession: S78202

"2.8 A resolution crystal structure of human TRAIL, a cytokine with
selective antitumor activity.";
Immunity 11:25-261(1999).
I- FUNCTION: Cytokine that binds to TNFRSF10A/TRAILR1,
TNFRSF10B/TRAILR2, TNFRSF10C/TRAILR3, TNFRSF10B/TRAILR4 and
possibly also to TNFRSF11B/OFG. Induces apoptosis. Its activity
may be modulated by binding to the decoy receptors
TNFRSF10C/TRAILR3, TNFRSF10D/TRAILR4 and TNFRSF11B/OPG that cannot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -i- SUBCELLULAR LOCATION: Type II membrane protein (Potential).
-i- TISSUE SPECIFICITY: Widespread; most predominant in spleen, lung

01-0CT-1996 (Rel. 34, Last sequence update)
05-UTL-2004 (Rel. 44, Last annotation update)
Tumor necrot is fact in a sequental annotation update of the control is a sequental annotation (TNF-related apoptosis inducing ligand) (TRAIL protein)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -i- SUBCELLULAR LOCATION: Type II membrane protein (Potential).
-i- TISSUB SPECIFICITY: Widespread.
-i- SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                                                                                                                                                                                                           GO; GO:001620; C:membrane; IEA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           J. Bacteriol. 185:2759-2773 (2003).

-!- FUNCTION: Catalyzes the transfer of the endogenously synthesized lipoate to apoproteins, creating an amide linkage that joins the free carboxyl group of lipoic acid to the epsilon-amino group of specific lysine residue in lipoate-dependent enzymes. Utilizes lipoyl-acyl-carrier protein as a source of lipoyl groups, although octanoyl groups from octanoyl acyl-acyl-carrier protein as a source of lipoyl groups, although octanoyl groups from octanoyl acyl-carrier protein (By similarity).

-!- CATALYTIC ACTIVITY: lipoyl-[acyl-carrier protein] + apo-protein = holo-protein + acyl-carrier protein.
-!- PATHWAY: Endogenous lipoate metabolism; lipoylation step.
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
                                                                                                               29-MAR-2004 (Rel. 43, Created)
29-MAR-2004 (Rel. 43, Last sequence update)
25-OCT-2004 (Rel. 45, Last annotation update)
Lipoyltransferase (EC 2.3.1.-) (Lipoyl-(acyl-carrier protein)-N-lipoyltransferase) (Lipoylevin ligase B).
